

次の計算をなさい。

$$(1) \quad \frac{4}{9} + \frac{5}{12} = \frac{16+15}{36} \\ = \frac{31}{36}$$

$$(2) \quad \frac{3}{8} + \frac{7}{10} = \frac{15+28}{40} \\ = \frac{43}{40}$$

$$(3) \quad \frac{5}{12} + \frac{7}{18} = \frac{15+14}{36} \\ = \frac{29}{36}$$

$$(4) \quad \frac{3}{8} + \frac{5}{12} = \frac{9+10}{24} \\ = \frac{19}{24}$$

$$(5) \quad \frac{9}{14} + \frac{11}{21} = \frac{27+22}{42} \\ = \frac{49}{42} = \frac{7}{6}$$

$$(6) \quad \frac{8}{15} - \frac{4}{9} = \frac{24-20}{45} \\ = \frac{4}{45}$$

$$(7) \quad \frac{13}{24} - \frac{5}{16} = \frac{26-15}{48} \\ = \frac{11}{48}$$

$$(8) \quad \frac{3}{14} - \frac{3}{21} = \frac{9-6}{42} \\ = \frac{3}{42} = \frac{1}{14}$$

$$(9) \quad \frac{11}{32} - \frac{1}{12} = \frac{33-8}{96} \\ = \frac{25}{96}$$

$$(10) \quad \frac{5}{39} - \frac{1}{26} = \frac{10-3}{78} \\ = \frac{7}{78}$$
