

次の計算をなさい。

$$(1) \quad \frac{9}{20} + \frac{11}{30} = \frac{27+22}{60} \\ = \frac{49}{60}$$

$$(2) \quad \frac{13}{15} + \frac{17}{25} = \frac{65+51}{75} \\ = \frac{116}{75}$$

$$(3) \quad \frac{11}{18} + \frac{7}{22} = \frac{121+63}{198} \\ = \frac{184}{198} = \frac{92}{99}$$

$$(4) \quad \frac{7}{12} + \frac{9}{16} = \frac{28+27}{48} \\ = \frac{55}{48}$$

$$(5) \quad \frac{8}{27} + \frac{5}{18} = \frac{16+15}{54} \\ = \frac{31}{54}$$

$$(6) \quad \frac{7}{11} - \frac{2}{5} = \frac{35-22}{55} \\ = \frac{13}{55}$$

$$(7) \quad \frac{13}{18} - \frac{7}{15} = \frac{65-42}{90} \\ = \frac{23}{90}$$

$$(8) \quad \frac{7}{10} - \frac{9}{14} = \frac{49-45}{70} \\ = \frac{4}{70} = \frac{2}{35}$$

$$(9) \quad \frac{5}{12} - \frac{3}{16} = \frac{20-9}{48} \\ = \frac{11}{48}$$

$$(10) \quad \frac{13}{18} - \frac{11}{24} = \frac{52-33}{72} \\ = \frac{19}{72}$$
