

$$(1) 12 - 7 = \square$$

A number bond diagram for 12, showing 10 and 2 in red circles connected by a green line.

$$(5) 17 - 8 = \square$$

A number bond diagram for 17, showing 10 and 7 in red circles connected by a green line.

$$(9) 16 - 7 = \square$$

A number bond diagram for 16, showing 10 and 6 in red circles connected by a green line.

$$(13) 15 - 8 = \square$$

A number bond diagram for 15, showing 10 and 5 in red circles connected by a green line.

$$(2) 15 - 9 = \square$$

A number bond diagram for 15, showing 10 and 5 in red circles connected by a green line.

$$(6) 13 - 5 = \square$$

A number bond diagram for 13, showing 10 and 3 in red circles connected by a green line.

$$(10) 14 - 6 = \square$$

A number bond diagram for 14, showing 10 and 4 in red circles connected by a green line.

$$(14) 16 - 7 = \square$$

A number bond diagram for 16, showing 10 and 6 in red circles connected by a green line.

$$(3) 14 - 5 = \square$$

A number bond diagram for 14, showing 10 and 4 in red circles connected by a green line.

$$(7) 18 - 9 = \square$$

A number bond diagram for 18, showing 10 and 8 in red circles connected by a green line.

$$(11) 13 - 4 = \square$$

A number bond diagram for 13, showing 10 and 3 in red circles connected by a green line.

$$(15) 12 - 4 = \square$$

A number bond diagram for 12, showing 10 and 2 in red circles connected by a green line.

$$(4) 16 - 8 = \square$$

A number bond diagram for 16, showing 10 and 6 in red circles connected by a green line.

$$(8) 14 - 7 = \square$$

A number bond diagram for 14, showing 10 and 4 in red circles connected by a green line.

$$(12) 17 - 9 = \square$$

A number bond diagram for 17, showing 10 and 7 in red circles connected by a green line.

$$(16) 18 - 9 = \square$$

A number bond diagram for 18, showing 10 and 8 in red circles connected by a green line.
