

● 次の分数のたし算をしましょう。

$$1 \quad \frac{3}{2} + \frac{5}{3}$$

$$= \frac{9}{6} + \frac{10}{6}$$

$$= \frac{19}{6} \left(3 \frac{1}{6} \right)$$

$$2 \quad \frac{1}{3} + \frac{5}{2}$$

$$= \frac{2}{6} + \frac{15}{6}$$

$$= \frac{17}{6} \left(2 \frac{5}{6} \right)$$

$$3 \quad \frac{7}{6} + \frac{2}{7}$$

$$= \frac{49}{42} + \frac{12}{42}$$

$$= \frac{61}{42} \left(1 \frac{19}{42} \right)$$

$$4 \quad \frac{1}{2} + \frac{7}{5}$$

$$= \frac{5}{10} + \frac{14}{10}$$

$$= \frac{19}{10} \left(1 \frac{9}{10} \right)$$

$$5 \quad \frac{1}{4} + \frac{5}{3}$$

$$= \frac{3}{12} + \frac{20}{12}$$

$$= \frac{23}{12} \left(1 \frac{11}{12} \right)$$

$$6 \quad \frac{2}{9} + \frac{3}{2}$$

$$= \frac{4}{18} + \frac{27}{18}$$

$$= \frac{31}{18} \left(1 \frac{13}{18} \right)$$

$$7 \quad \frac{1}{6} + \frac{9}{5}$$

$$= \frac{5}{30} + \frac{54}{30}$$

$$= \frac{59}{30} \left(1 \frac{29}{30} \right)$$

$$8 \quad \frac{7}{4} + \frac{2}{9}$$

$$= \frac{63}{36} + \frac{8}{36}$$

$$= \frac{71}{36} \left(1 \frac{35}{36} \right)$$
