

● 次の分数のたし算をしましょう。

$$1 \quad \frac{3}{5} + \frac{4}{3}$$

$$= \frac{9}{15} + \frac{20}{15}$$

$$= \frac{29}{15} \left(1 \frac{14}{15} \right)$$

$$2 \quad \frac{1}{7} + \frac{3}{2}$$

$$= \frac{2}{14} + \frac{21}{14}$$

$$= \frac{23}{14} \left(1 \frac{9}{14} \right)$$

$$3 \quad \frac{2}{3} + \frac{9}{7}$$

$$= \frac{14}{21} + \frac{27}{21}$$

$$= \frac{41}{21} \left(1 \frac{20}{21} \right)$$

$$4 \quad \frac{1}{4} + \frac{8}{5}$$

$$= \frac{5}{20} + \frac{32}{20}$$

$$= \frac{37}{20} \left(1 \frac{17}{20} \right)$$

$$5 \quad \frac{2}{3} + \frac{3}{2}$$

$$= \frac{4}{6} + \frac{9}{6}$$

$$= \frac{13}{6} \left(2 \frac{1}{6} \right)$$

$$6 \quad \frac{2}{9} + \frac{11}{8}$$

$$= \frac{16}{72} + \frac{99}{72}$$

$$= \frac{115}{72} \left(1 \frac{43}{72} \right)$$

$$7 \quad \frac{3}{5} + \frac{9}{8}$$

$$= \frac{24}{40} + \frac{45}{40}$$

$$= \frac{69}{40} \left(1 \frac{29}{40} \right)$$

$$8 \quad \frac{1}{6} + \frac{9}{7}$$

$$= \frac{7}{42} + \frac{54}{42}$$

$$= \frac{61}{42} \left(1 \frac{19}{42} \right)$$
