

● 次の分数のたし算をしましょう。

$$1 \quad \frac{1}{2} + \frac{5}{3}$$

$$= \frac{3}{6} + \frac{10}{6}$$

$$= \frac{13}{6} \left(2 \frac{1}{6} \right)$$

$$2 \quad \frac{2}{7} + \frac{5}{3}$$

$$= \frac{6}{21} + \frac{35}{21}$$

$$= \frac{41}{21} \left(1 \frac{20}{21} \right)$$

$$3 \quad \frac{2}{5} + \frac{7}{6}$$

$$= \frac{12}{30} + \frac{35}{30}$$

$$= \frac{47}{30} \left(1 \frac{17}{30} \right)$$

$$4 \quad \frac{5}{4} + \frac{2}{7}$$

$$= \frac{35}{28} + \frac{8}{28}$$

$$= \frac{43}{28} \left(1 \frac{15}{28} \right)$$

$$5 \quad \frac{10}{9} + \frac{3}{10}$$

$$= \frac{100}{90} + \frac{27}{90}$$

$$= \frac{127}{90} \left(1 \frac{37}{90} \right)$$

$$6 \quad \frac{11}{6} + \frac{1}{7}$$

$$= \frac{77}{42} + \frac{6}{42}$$

$$= \frac{83}{42} \left(1 \frac{41}{42} \right)$$

$$7 \quad \frac{3}{8} + \frac{5}{3}$$

$$= \frac{9}{24} + \frac{40}{24}$$

$$= \frac{49}{24} \left(2 \frac{1}{24} \right)$$

$$8 \quad \frac{2}{7} + \frac{7}{5}$$

$$= \frac{10}{35} + \frac{49}{35}$$

$$= \frac{59}{35} \left(1 \frac{24}{35} \right)$$
