

● 次の分数のたし算をしましょう。

$$1 \quad \frac{3}{2} + \frac{2}{5}$$

$$= \frac{15}{10} + \frac{4}{10}$$

$$= \frac{19}{10} \left(1 \frac{9}{10} \right)$$

$$2 \quad \frac{9}{8} + \frac{1}{7}$$

$$= \frac{63}{56} + \frac{8}{56}$$

$$= \frac{71}{56} \left(1 \frac{15}{56} \right)$$

$$3 \quad \frac{1}{3} + \frac{5}{4}$$

$$= \frac{4}{12} + \frac{15}{12}$$

$$= \frac{19}{12} \left(1 \frac{7}{12} \right)$$

$$4 \quad \frac{1}{6} + \frac{9}{4}$$

$$= \frac{2}{12} + \frac{27}{12}$$

$$= \frac{29}{12} \left(2 \frac{5}{12} \right)$$

$$5 \quad \frac{5}{8} + \frac{5}{12}$$

$$= \frac{15}{24} + \frac{10}{24}$$

$$= \frac{25}{24} \left(1 \frac{1}{24} \right)$$

$$6 \quad \frac{3}{4} + \frac{5}{16}$$

$$= \frac{12}{16} + \frac{5}{16}$$

$$= \frac{17}{16} \left(1 \frac{1}{16} \right)$$

$$7 \quad \frac{6}{5} + \frac{3}{20}$$

$$= \frac{24}{20} + \frac{3}{20}$$

$$= \frac{27}{20} \left(1 \frac{7}{20} \right)$$

$$8 \quad \frac{4}{9} + \frac{7}{10}$$

$$= \frac{40}{90} + \frac{63}{90}$$

$$= \frac{103}{90} \left(1 \frac{13}{90} \right)$$
