

● 次の分数のたし算をしましょう。

$$1 \quad \frac{3}{5} + \frac{5}{9}$$

$$= \frac{27}{45} + \frac{25}{45}$$

$$= \frac{52}{45} \left(1 \frac{7}{45} \right)$$

$$2 \quad \frac{1}{4} + \frac{6}{7}$$

$$= \frac{7}{28} + \frac{24}{28}$$

$$= \frac{31}{28} \left(1 \frac{3}{28} \right)$$

$$3 \quad \frac{5}{3} + \frac{1}{8}$$

$$= \frac{40}{24} + \frac{3}{24}$$

$$= \frac{43}{24} \left(1 \frac{19}{24} \right)$$

$$4 \quad \frac{5}{6} + \frac{4}{9}$$

$$= \frac{15}{18} + \frac{8}{18}$$

$$= \frac{23}{18} \left(1 \frac{5}{18} \right)$$

$$5 \quad \frac{1}{4} + \frac{5}{6}$$

$$= \frac{3}{12} + \frac{10}{12}$$

$$= \frac{13}{12} \left(1 \frac{1}{12} \right)$$

$$6 \quad \frac{2}{3} + \frac{7}{18}$$

$$= \frac{12}{18} + \frac{7}{18}$$

$$= \frac{19}{18} \left(1 \frac{1}{18} \right)$$

$$7 \quad \frac{3}{2} + \frac{1}{12}$$

$$= \frac{18}{12} + \frac{1}{12}$$

$$= \frac{19}{12} \left(1 \frac{7}{12} \right)$$

$$8 \quad \frac{5}{6} + \frac{3}{8}$$

$$= \frac{20}{24} + \frac{9}{24}$$

$$= \frac{29}{24} \left(1 \frac{5}{24} \right)$$
