

● 次の分数のたし算をしましょう。

$$1 \quad \frac{4}{3} + \frac{3}{5}$$

$$= \frac{20}{15} + \frac{9}{15}$$

$$= \frac{29}{15} \left(1 \frac{14}{15} \right)$$

$$2 \quad \frac{5}{2} + \frac{1}{3}$$

$$= \frac{15}{6} + \frac{2}{6}$$

$$= \frac{17}{6} \left(2 \frac{5}{6} \right)$$

$$3 \quad \frac{9}{7} + \frac{2}{3}$$

$$= \frac{27}{21} + \frac{14}{21}$$

$$= \frac{41}{21} \left(1 \frac{20}{21} \right)$$

$$4 \quad \frac{7}{5} + \frac{1}{2}$$

$$= \frac{14}{10} + \frac{5}{10}$$

$$= \frac{19}{10} \left(1 \frac{9}{10} \right)$$

$$5 \quad \frac{3}{2} + \frac{2}{3}$$

$$= \frac{9}{6} + \frac{4}{6}$$

$$= \frac{13}{6} \left(2 \frac{1}{6} \right)$$

$$6 \quad \frac{5}{7} + \frac{8}{21}$$

$$= \frac{15}{21} + \frac{8}{21}$$

$$= \frac{23}{21} \left(1 \frac{2}{21} \right)$$

$$7 \quad \frac{5}{4} + \frac{1}{6}$$

$$= \frac{15}{12} + \frac{2}{12}$$

$$= \frac{17}{12} \left(1 \frac{5}{12} \right)$$

$$8 \quad \frac{5}{8} + \frac{5}{12}$$

$$= \frac{15}{24} + \frac{10}{24}$$

$$= \frac{25}{24} \left(1 \frac{1}{24} \right)$$
