

● 次の分数のたし算をしましょう。

$$1 \quad \frac{3}{2} + \frac{2}{9}$$

$$= \frac{27}{18} + \frac{4}{18}$$

$$= \frac{31}{18} \left(1 \frac{13}{18} \right)$$

$$2 \quad \frac{9}{8} + \frac{3}{5}$$

$$= \frac{45}{40} + \frac{24}{40}$$

$$= \frac{69}{40} \left(1 \frac{29}{40} \right)$$

$$3 \quad \frac{2}{9} + \frac{7}{4}$$

$$= \frac{8}{36} + \frac{63}{36}$$

$$= \frac{71}{36} \left(1 \frac{35}{36} \right)$$

$$4 \quad \frac{9}{7} + \frac{3}{8}$$

$$= \frac{72}{56} + \frac{21}{56}$$

$$= \frac{93}{56} \left(1 \frac{37}{56} \right)$$

$$5 \quad \frac{2}{3} + \frac{7}{6}$$

$$= \frac{4}{6} + \frac{7}{6}$$

$$= \frac{11}{6} \left(1 \frac{5}{6} \right)$$

$$6 \quad \frac{7}{8} + \frac{5}{16}$$

$$= \frac{14}{16} + \frac{5}{16}$$

$$= \frac{19}{16} \left(1 \frac{3}{16} \right)$$

$$7 \quad \frac{5}{6} + \frac{7}{9}$$

$$= \frac{15}{18} + \frac{14}{18}$$

$$= \frac{29}{18} \left(1 \frac{11}{18} \right)$$

$$8 \quad \frac{1}{6} + \frac{7}{8}$$

$$= \frac{4}{24} + \frac{21}{24}$$

$$= \frac{25}{24} \left(1 \frac{1}{24} \right)$$
